Connecticut’s Community Colleges have made a commitment to teaching, training, and technology to prepare the state’s highly skilled workforce, which attracts businesses and investment from around the world. Education and job training are more affordable and accessible for everyone because of Connecticut’s investment in community college education and training. In a given year, the colleges serve more than 40,000 individuals in non-credit programs, of which more than 40% are workforce development topics.

Each of Connecticut’s 12 community colleges is part of the Business and Industry Services Network (BISN), a collaborative program linking business, industry, state government, and education.
Community colleges are the backbone of what manufacturers need. The majority of people at manufacturing sites are from the community colleges. Manufacturers need schools to provide skills.”

Bob Torrani, Director, CT Center for Advanced Technology

Customized job training provides employers with quality, professional, cost-effective training to meet their workforce needs.

Connecticut Community Colleges provide programs that prepare individuals to enter or re-enter the workforce, as well as programs that strengthen and upgrade the skills of incumbent workers with a view toward increased productivity and responsibility.
